**921.07 INDUSTRIAL RATES.**

(a) Rate. Industrial power shall be subject to availability. The billing rate for industrial power shall be as follows:

Demand Charge per kw	\$7.80
Energy Charge per kwh	\$.0342

(b) Minimum Charge. The minimum monthly charge for industrial power shall be equal to the demand charge per kw multiplied by the kw of the billing demand.

(c) Measurement and Determination of Demand. Billing demand shall be determined to be:

- (1) The measured 15-minute peak kw demand during the current month;
- or
- (2) 50% of the highest measured 15-minute peak demand in the last twelve (12) months.

(d) Delivery Voltage. The customer shall own, operate, and maintain all necessary substation and appurtenances thereto for receiving and purchasing all electric energy at the delivery voltage agreed upon by the customer and the City. The customer’s demand and energy usage shall be measured as of the delivery voltage, or at the option of the City, at the secondary of customers’ transformation voltage(s). If measured at secondary voltage, billing demand for energy shall be corrected for losses incurred.

(e) Power Factor. The rate set forth herein for each delivery point is based upon the maintenance by the customer of an average monthly power factor of 85%, leading or lagging as shown by integrating instruments. When the average monthly power factor is above or below 85%, the kwh as metered will, for billing purposes, be multiplied by the following constants:

<b><u>Effective Monthly Power Factor</u></b>	<b><u>Constant</u></b>
1.00	.951
.95	.965
.90	.981
.85	1.000
.80	1.023

.65	1.1255
.60	1.1785
.55	1.2455
.50	1.3335

Constants for other than the effective power factors given in the foregoing table will be determined from the same formula used to determine the given constants.
